

ABSTRACT

According to a method for packaging CDs, DVDs and similar
digital record carriers in a corresponding foldable
5 package (10), including a blank (11) and one or more
trays (12) glued to corresponding blank sections (13),
the discs (1) are first introduced into housings (15)
made in the trays (12) before the trays are applied to
the blank sections (13). After a suitable glue has been
10 applied to the trays (12), containing the discs (1), the
trays (12) are set in contact with the sections (13), and
then the so obtained package (10) is conveyed toward
further work stations. The glue can be applied to the
trays (12) also before placing the discs (1), and anyway,
15 in any moment before the trays (12) are applied to the
blank sections (13).
